

## Social Innovation and technology

Social innovation is an effort to develop new, alternative solutions where established practices fall short. While it is very common to obsess over technology when talking about social innovation, technology is not magic; it alone cannot solve the problems of the world and create social change.

In order to help secondary school students break free from this mindset, JCDISI's design education team developed Tech Cards as a tool to introduce the language of input—processing—output. By encouraging students to think through creative combinations, the activity promotes seeing simple, existing technologies as part of wider action-driven and impact-oriented solutions.

### Activity: New connections that change the world

Playing on this wall-hung adaptation of Tech Cards, identify the correct combination of Input, Output and Connection cards to create the chosen innovation. Did you ever think this combination was possible?

## 社會創新與科技

社會創新致力為社會問題發展出不同的替代解決方案，彌補現有方法的不足。社會創新的討論常會向科技傾斜，但科技並非魔法，單憑科技既不可能解決世界上的問題，亦無法促成社會變革。

為了幫助學生擺脫這種思維模式，JCDISI的設計教育團隊研發技術卡，向學生介紹「輸入-處理-輸出」的語言。我們鼓勵學生利用現有的簡單技術，創造各種組合進行思考，創作出以行動和影響為本的解決方案。

### 活動：改變世界的新聯繫

玩家在牆上的技術卡片找出輸入、輸出和連接卡片，並排列出正確的組合，創造選中的創新項目。你可有想過這種組合可能嗎？
